ACKNOWLEDGEMENT

This project will not be successful without the kind support of the Aj. Ronnachai Sretawat Na Ayutaya as advisor ,Asst. Prof. Gp.Capt. Dr.Thongchai Yooyativong and Aj. Dr.Mahamah Sebakor is the committees. give advice and guide the development of this project. until the development can be completed according to the objectives

We would like to thank everyone for their advices and help. We are also grateful to our parents and friends for their continuous encouragement throughout this project. This accomplishment would not have been possible without them. Thank you.

Abstract

This senior project proposes a development of a website for searching living places around Mae Fah Luang University by focusing on Mae Fah Luang University students who are finding a living place because we found the problem that a large number of living places are rented outside the university and there are many dormitories around Mae Fah Luang University. Finding a living place can be difficult to find all the information that you need and it can lead to delays and possibly missing the opportunity to get the living places that you need.

CHAPTER 1

INTRODUCTION

1.1 Background and Rational

At present is the era of modern technology which has a very important role in daily life. The existence of technology makes life more comfortable Whether it's communication, research, using technology for work or business.

Mae Fah Luang University is a university that has a large number of students each year. Every year, a large number of living places are rented outside the university. And there are many dormitories around Mae Fah Luang University. Finding a living place can be difficult to find all the information that you need, which can lead to delays and possibly missing the opportunity to get the living places that you need. Therefore, we have seen the problems, so we want to collect information about living places around Mae Fah Luang University, such as room rent, distance, water bills, electric bills, contact information and other important information. so users can view all the information to make a decision in choosing a living place. This is for convenience, reduces time to find, gets accurate information and doesn't miss the opportunity to get a living place that meets the needs of users.

1.2 Objective

1.2.1 To develop a website that shows a living place around Mae Fah Luang University.

1.2.2 People can choose the best suitable living place by themselves.

1.3 Scope

1.3.1 General users

1.3.1.1 Can watch the list of living places

1.3.1.2 Can use advance search.

1.3.1.3 Watch the detail and review the living places.

1.3.1.4 Can compare two places to make a better decision.

1.3.2 Owner users

1.3.2.1 Post details of the living place.

1.3.2.2 Can edit and delete your own post.

1.3.2.3 Can give review to another post except your own post

1.3.3 Administrator user

1.3.3.1 Management of the website.

1.3.3.2 Approval of the living place post of owner.

1.3.3. Add or Delete the review and post.

1.4 Methodology

1.4.1 Pre-project

1.4.1.1 Proposal preparation

1.4.1.2 Literature review and requirement gathering

1.4.1.3 System analysis

1.4.1.4 System design

1.4.1.5 Progress 1

1.4.1.6 Progress 2

1.4.1.7 Final Documentation Evaluation

1.4.1.8 Final Presentation Evaluation

1.4.2 Project

1.4.2.1 System development

1.4.2.2 System testing

1.4.2.3 Project presentation

1.5 Plan

Table 1.1 Working plan

Plan/Month		Pre - Project					Project				
	Jan	Feb	Mar	Apr	May	Aug	Sep	Oct	Nov	Dec	
Proposal preparation

1.6 Expected Result

1.6.1 Output

1.6.1.1 A website that shows a living place around Mae Fah Luang university correctly.

1.6.2 Impact

1.6.2.1 Users will be able to find the best suitable living place by themselves.

1.7 Resources

1.7.1 Equipment

1.7.1.1 Hardware

1.7.1.1.1 Computer

1.7.1.1.2 Laptop that can access the internet.

1.7.1.2 Software

1.7.1.2.1 Visual Studio Code (For coding)

1.7.1.2.2 Figma (For design UX/UI)

1.7.1.2.3 Photoshop (For edit picture)

1.7.1.2.4 Mongo DB

1.7.1.3 Place

1.7.1.3.1 Online

1.7.1.4 Budget

1.7.1.4.1 Unknown now

CHAPTER 2

LITERATURE REVIEW

2.1 Related Research

Chiraphon Wongsrithe.(2016) has researched the development application search for dormitory Amphoe Muang Maha Sarakham as a dormitory search system. To help students who come to study at the school to have a comfortable search. by searching through an application on a smartphone the user side of the system consists of 2 systems, divided into 1) users, who can search for accommodation, choose the price and type of accommodation; 2) administrators can add dormitory information, type, price, add the dormitory location.

Research by the author of THE LIVING PLACES AROUND MAE FAH LUANG UNIVERSITY WEBSITE is a system for finding dormitories around Mae Fah Luang University. Collecting dormitories around Mae Fah Luang University for convenience in searching will be different from reference research. It is a search through a web application which has the form of a page. The website is more beautiful and modern. The user side of the system is divided into 3 systems. 1) General users can search for each type of dormitory, choose the price, specify the needs of the dormitory. dorm comparison and can review the dormitory 2) Administrator user can Management of the website. Approval of the living place post of owner. Add or delete the review and post. 3) Owner users is a management system of the dormitory owner that can manage, post, edit, delete. Information of the dormitory itself. Adding Owner users is considered to alleviate the workload for the admin. And for the accuracy and speed of the information, if the dormitory information is changed Owner users can edit it immediately.

2.2 Related Work

1. Agoda

Agoda is one of the world's fastest growing online travel booking platforms. it provides travelers with easy access to a wide choice of luxury and budget hotels, apartments, homes, and villas to suit all budgets and travel occasions.

For development side agoda's front-facing web applications use the .net stack and other modern frontend technologies like react, redux, webpack, and graphql. And the server-side is mainly concerned on apis and returning minimal page-landing html. client-side deals with the ui of the website (desktop and mobile) and webviews for native apps.

Figure 2.1: Detail of Agoda website and home page.

2. Airbnb

Airbnb is a website about share hosted travelers looking for a place to stay. They can list their space and book unique accommodations anywhere in the world. And Airbnb experience hosts share their passions and interests with both travelers and locals.

For development side airbnb uses ReactJS as the framework. It is actually a JavaScript UI library, and it is highly flexible and efficient, and the front end is made up of ReactJS.

Figure 2.2 Detail of Airbnb website and the information page.

3. Hongpak.in.th

Hongpak.in.th is the website for find a condo or apartment for rent. In the living place page will show the information for who want to know and the owner can post the detail of living place to find customer too.

The screenshot shows the Hongpak.in.th website interface. At the top, there is a navigation bar with the logo and user profile. Below it, a search filter overlay is displayed with the title 'อพาร์ทเมนท์ หอพัก บ้านเช่า ห้องพักรายวันและรายเดือน'. The filter includes four input fields: 'ค้นจากสถานีรถไฟฟ้า', 'ค้นจากสถานศึกษา', 'ค้นตามจังหวัด', and 'ค้นจากแผนที่'. Below these fields is a text input 'ค้นจาก สถานี, ถนน, จังหวัด' and two buttons: 'ห้องพักรายเดือน' and 'ห้องพักรายวัน'. The main content area shows a grid of nine property listings, each with a thumbnail image, title, address, and price range.

Property Name	Address	Price Range

Figure 2.3: Hongpak website that home page show lists of living places and user can post living place.

2.3 Related Technology

2.3.1 Software

1. Visual Studio Code

Visual Studio Code is a source-code editor made by Microsoft for Windows, Linux and macOS. Features include support for debugging, syntax highlighting, intelligent code completion, snippets, code refactoring, and embedded Git. Users can change the theme, keyboard shortcuts, preferences, and install extensions that add additional functionality.

Visual Studio Code is a source-code editor that can be used with a variety of programming languages, including Java, JavaScript, Go, Node.js, Python and C++. It is based on the Electron framework, which is used to develop Node.js Web applications that run on the Blink layout engine.

Visual Studio Code can be extended via extensions, available through a central repository. This includes additions to the editor and language support. A notable feature is the ability to create extensions that add support for new languages, themes, and debuggers, perform static code analysis, and add code linters using the Language Server Protocol.

Figure 2.4: Visual Studio Code window

2. Figma

Figma is a vector graphics editor and prototyping tool which is primarily web-based, with additional offline features enabled by desktop applications for macOS and Windows. The Figma mobile app for Android and iOS allows viewing and interacting with Figma prototypes in real-time mobile devices. The feature set of Figma focuses on use in user interface and user experience design, with an emphasis on real-time collaboration.

Figma is a design platform for teams who build products together. Born on the Web, Figma helps teams create, share, test, and ship better designs from start to finish. Whether it's consolidating tools, simplifying workflows, or collaborating across teams and time zones, Figma makes the design process faster, more efficient, and fun while keeping everyone on the same page.

Figure 2.5: Example of UI design with Figma

3. Adobe Photoshop

Adobe Photoshop is a photo editing and raster graphic design software which allows users to create, edit, and manipulate various graphics as well as digital art. It also allows you to create and edit raster images with multiple layers and import the images in various file formats. Photoshop is developed by Adobe Systems for both Windows and MacOS.

Figure 2.6: Adobe Photoshop window

2.3.2 Language and tool development

1. Google Map

Google Maps is a web mapping platform and consumer application offered by Google. It offers satellite imagery, aerial photography, street maps, 360° interactive panoramic views of streets (Street View), real-time traffic conditions, and route planning for traveling by foot, car, bike, air (in beta) and public transportation. As of 2020, Google Maps was being used by over 1 billion people every month around the world.

Google Maps offers an API that allows maps to be embedded on third-party websites, and offers a locator for businesses and other organizations in numerous countries around the world. Google Map Maker allowed users to collaboratively expand and update the service's mapping worldwide but was discontinued from March 2017. However, crowdsourced contributions to Google Maps were not discontinued as the company announced those features would be transferred to the Google Local Guides program.

Figure 2.7: Google Map window

2. MongoDB

MongoDB is an open source NoSQL database management program. NoSQL is used as an alternative to traditional relational databases. NoSQL databases are quite useful for working with large sets of distributed data. MongoDB is a tool that can manage document-oriented information, store or retrieve information.

MongoDB supports various forms of data. It is one of the many nonrelational database technologies that arose in the mid-2000s under the NoSQL banner normally, for use in big data applications and other processing jobs involving data that doesn't fit well in a rigid relational model. Instead of using tables and rows as in relational databases, the MongoDB architecture is made up of collections and documents.

Organizations can use MongoDB for its ad-hoc queries, indexing, load balancing, aggregation, server-side JavaScript execution and other features.

```

1 // MongoDB Playground
2 // To disable this template go to Settings | MongoDB | Use Default Template For Playground.
3
4 // Select the database to use.
5 use('test');
6
7 // Insert a few documents into the sales collection.
8 db.sales.insertMany([
9   { '_id': 1, 'item': 'abc', 'price': 10, 'quantity': 2, 'date': new Date('2014-03-01T00:00:00Z') },
10  { '_id': 2, 'item': 'jkl', 'price': 20, 'quantity': 1, 'date': new Date('2014-03-01T09:00:00Z') },
11  { '_id': 3, 'item': 'xyz', 'price': 5, 'quantity': 10, 'date': new Date('2014-03-15T09:00:00Z') },
12  { '_id': 4, 'item': 'xyz', 'price': 5, 'quantity': 20, 'date': new Date('2014-04-04T11:21:39.736Z') },
13  { '_id': 5, 'item': 'abc', 'price': 10, 'quantity': 10, 'date': new Date('2014-04-04T21:23:13.331Z') },
14  { '_id': 6, 'item': 'def', 'price': 7.5, 'quantity': 5, 'date': new Date('2015-06-04T05:08:13Z') },
15  { '_id': 7, 'item': 'def', 'price': 7.5, 'quantity': 10, 'date': new Date('2015-09-10T08:43:00Z') },
16  { '_id': 8, 'item': 'abc', 'price': 10, 'quantity': 5, 'date': new Date('2016-02-06T20:28:13Z') },
17 ]);
18
19 // Run an aggregation to view total sales for each product in 2014.
20 const aggregation = [
21   { $match: { $and: [ $gte: new Date('2014-01-01'), $lt: new Date('2015-01-01') ] } },
22   { $group: { _id: $date, 'totalSaleAmount': { $sum: '$quantity' } } }
23 ];
24 db.sales.aggregate(aggregation);

Figure 2.8: Example of MongoDB

3. JavaScript

JavaScript is a scripting or programming language that allows you to implement complex features on web pages every time a web page does more than just sit there and display static information for you to look at displaying timely content updates, interactive maps, animated 2D/3D graphics, scrolling video jukeboxes, etc. JavaScript is the Programming Language for the Web, can update and change both HTML and CSS and can calculate, manipulate and validate data.

Figure 2.9: Example of JavaScript code

4. React

React (also known as React.js or ReactJS) is a free and open-source front-end JavaScript library for building user interfaces based on UI components. It is maintained by Meta (formerly Facebook) and a community of individual developers and companies. React can be used as a base in the development of single-page, mobile, or server-rendered applications with frameworks like Next.js. However, React is only concerned with state management and rendering that state to the DOM, so creating React applications usually requires the use of additional libraries for routing, as well as certain client-side functionality.

Figure 2.10: Example of React code

5. Node.js

Node.js is an open-source, cross-platform, back-end JavaScript runtime environment that runs on the V8 engine and executes JavaScript code outside a web browser. Node.js lets developers use JavaScript to write command line tools and for server-side scripting—running scripts server-side to produce dynamic web page content before the page is sent to the user's web browser. Consequently, Node.js represents a "JavaScript everywhere" paradigm, unifying web-application development around a single programming language, rather than different languages for server-side and client-side scripts.

Node.js has an event-driven architecture capable of asynchronous I/O. These design choices aim to optimize throughput and scalability in web applications with many input/output operations, as well as for real-time Web applications

Figure 2.11: Example of Node.js

CHAPTER 3

METHODOLOGY

Methodolgy for living places around Mae Fah Luang University Website The student defined Methodolgy in 4 steps as follows

3.1 target group

Target groups include Student at Mae Fah Luang University and Dormitory owner

3.2 Educational tools

3.2.1 Web application living places around Mae Fah Luang University Website

3.2.2 Quality assessment form Web application living places around Mae Fah Luang University Website

3.3 System Development

3.3.1 Problem Definition

Every year, Mae Fah Luang University has an increasing number of students coming to study every year (compare to the academic year 2020 There are a total number of students 13,801 people, academic year 2021 There are a total of 14,732 students: Reference: https://reg.mfu.ac.th/registrar/statistics/main_m.htm), which every year there are many students who want to find dormitories around Mae Fah Luang University. And there are many dormitories around Mae Fah Luang University also increasing. from the increasing number of dormitories It is difficult for students to find all the information. Because many dormitories do not have public relations, many students do not know. and having travel problems, there is a convenient place to find a dormitory This results in dormitories that do not meet the needs and miss the opportunity to get dormitories that meet their needs.

3.3.2 Analysis

We analyze how to design diagrams and other detail of work and we design 2 diagrams is Use case Diagram and Class Diagram.

3.3.2.1 Use case Diagram

Figure 3.1: Use case Diagram

From the figure 3.1 Use Case Diagram, it has 3 roles

1. Admin role have 6 use cases

- 1.1 Login for admin can manage websites.
- 1.2 Manage the post like delete the post.
- 1.3 Manage account of user. Admin can delete the bad behavior users.
- 1.4 Approval post. Admin have a duty to check the post before approving it.
- 1.5 Logout for when the admin finished their duty.

2. Owner user role have 3 use cases

- 2.1 Login because the owner of the living place should register before post anything.
- 2.2 Create, update and delete posts that you post about your living places.
- 2.3 Logout for when the owner user finishes their task.

3. General user have 5 use cases

- 3.1 Add and edit comment for the other user to see your review about places.
- 3.2 Search living places. User can search the living places from name, location, price, type etc.
- 3.3 See details of living place for users to decide about living place they want.
- 3.4 Living place's map to see the location of the living place.
- 3.5 Compare tool. It's a tool that helps users decide between 2 living places that they want to consider the best living place.

3.3.2.2 Class Diagram

Figure 3.2: Class Diagram

From figure 3.3: Class Diagram, it contains 5 class is User, Living place, Picture, Facilities, Comment

1. User contain of user id, first name. last name, password, email and telephone number
2. Living place contain of living place id. name, type, address, room price, water price, electric price, telephone number, line, facebook, description, latitude and longitude
3. Picture contain of picture id, picture number and name
4. Facilities contain of facilities id, living place id, air conditioner, fan, water heater, furnished, television, wifi, pets, smoking, parking, elevator, security keycard, cctv, pool, fitness and laundry
5. Comment contains of comment id, living place id and text

3.4 Design

The design of website are very important for user when they are using our website, we might design it for user friendly and modern design.

1. Homepage

Figure 3.3: Show dormitory and houses and other menus

From figure 3.3: Show dormitory and houses and other menus, the homepage contain of menus and search it can search by name of places and the body of website are the list of dormitory and house that show separate be the type of living places.

2. Search

logo HOME COMPARE Search SIGN IN

Figure 3.12: Show all the post in website

From figure 3.12: Show all the post in website, This page are contain all the post of living places for admin to manage the post.

11. Login

Figure 3.13: Sign in page

From figure 3.13: Sign in page, This shows the login page, this page has a username box and password box to check if the user already has an account or not. The other way is to login with a google account or Facebook account for convenience.

12. Register

The image shows a sign-up page layout. On the left is a large gray rectangular area labeled "IMG". To its right, the page has a white background with the heading "sign up" in a bold, lowercase font. Below the heading are five input fields: "First name" and "Last name" are side-by-side; "Email" is a single wide field; "Pass" and "Confirm Pass" are side-by-side. Below these fields is a wide "sign up" button. At the bottom, centered, is the text "Already a member? Sign In".

Figure 3.14: Sign up page

From figure 3.13: Sign up page, This page is a register page. It has a username, first name, last name, password, email and telephone number. When you register with an email you will have a verification email to confirm that your account has been successfully registered.

CHAPTER 4

CONCLUSION

4.1 Conclusion

We have set the scope of website development from research planning and found the related research for reference from analysis design and system design to make the website attractive and usable and more efficient. We set the website development for three main roles: UX/UI design, Front-end and Back-end. UX/UI design is the aesthetic elements by which people interact with a product and the experience a user has when interacting with a product. Front-end are development of the graphical user interface of a website. Back-end builds and maintains a server, an application, and a database.
