CHAPTER 1

INTRODUCTION

1.1 Background and Rational

Because of access to various websitesWe cannot know whether our website is safe or not. Anything can attack us, so we use machine learning to fix the problem.

Artificial intelligence and machine learning are the latest hot topics that make everyone super excited in the field of digital transformation. Its applications have found its way to all industries including the use of AI in cyber security. In this digital era, software development and testing has become more and more complex and most IT companies are facing the challenge of delivering the products on time.

The old school rule-based automation provides a limited scope of reducing human workWith the combination of artificial intelligence and automation, we can not only make the system efficient and easy but also reduce the human effort. It's important to understand how this works in the real world.

1.2 Objective

1.2.1 To explore features in traditional machine learning workflows for ransomware detection and classification.

1.2.2 To find out when a computer is infected with ransomware using machine learning.

1.3 Scope

1.3.1 Conduct on Vmware

1.To observe the behavior of the ransomware that does what to the computer.

1.4 Methodology

1.4.1 Proposal

1.4.2 Progress 1

1.4.3 Progress 2

1.4.4 Final Documentation Evaluation

1.4.5 Final Presentation Evaluation

1.4.6 System development

1.4.7 System testing

1.4.8 Project presentation

1.5 Plan

	Pre-Project				Project				
Plan/month	Feb	Mar	Apr	May	Aug	Sep	Oct	Nov	Dec
Proposal									
Progress 1									
Progress 2									
Final Documentation Evaluation									
Final Presentation Evaluation									
System development									
System testing									
Project presentation									

1.7 Expected Result

1.7.1 We can see our website that there are ten thousand secure websites.

1.7.2 We can develop a learning machine to work in web surveillance instead.

1.8 Place and Equipment

1.7.1 Place (Locate the working place such as MFU and/or other places for getting requirements, testing and installing the system)

1.7.2 Hardware (Identify also the minimum specification)

1.7.3 Software (List all target software and version)

CHAPTER 2

LITERATURE REVIEW

2.1 Related Research

Ransomware Evolution, Target and Safety Measures, This research shows the working of ransomware with its evolution and general characteristics of few popular ransomware. But the project we will explore and tell the users that there is Ransomware that can make users stop Ransomware in time.

Ransomware: Evolution, Mitigation and Prevention, This research is about the evolution of ransomware and how to protect their digital resources. Clearly, protecting oneself from ransomware is hard. If firms find it challenging, what chance to individual users have of protecting themselves? And all of this is happening as both firms and individuals move more and more of their data, and lives, online. Unlike a mugger or burglar, these attackers are typically shadowy figures from other countries that have weak or nonexistent law enforcement, making it unlikely that law enforcement is going to make much of a dent in the wave of ransomware.

Ransomware Evolution, Target and Safety Measures, This research presents few facts about ransomware with its working and suggestion to save computers from attack. It shows safety guidelines from ransomware that will be helpful to researchers as well as society to save data in near future. The review discusses a picture of the evolution of ransomware with its effects on the system, way of working and tricks to save our data during the attack.

2.2 Related Work

A brief study of Wannacry Threat: Ransomware Attack 2017 This research study about Ransomware named WannaCry Ransomware Attack 2017 was the most terrific attack. The most important source of ransomware virus via phishing emails and visiting a website that contains a malicious program. So, it's essential for computer users to keep back of data regularly.

The rise of machine learning for detection and classification of malware: Research developments, trends and challenges It aims to provide a systematic and detailed overview of machine learning techniques for detecting malware and in particular deep learning techniques The main works of the article are

- (1) It provides a complete description of methods and features in traditional machine learning workflows for Malware Detection and Classification
- (2) explores the challenges and limitations of traditional machine learning.
- (3) analyze the latest trends and developments in the field with a special focus on deep learning.

Guidelines also

- (4) address research issues and unresolved challenges of state-of-the-art technologies.
- (5) discuss a new direction of research. Surveys help researchers understand

Web Scraping using Machine Learning. This thesis explores the possibilities of creating a robust Web Scraping algorithm. But our project will explore in computers whether there is ransomware or not.

2.3 Related Technology

We use Vmware by creating computer simulations and we download ransomware explorer and study the behavior of ransomware and tell the users that there is Ransomware . and use wireshark to intercept the data running into the computer. There are some parts and then do it and train it in machine learning.

CHAPTER 3

METHODOLOGY

3.1 Activity diagram

We analyze how to design diagrams and other detail of work

3.2 Method

Simulate ransomware attack

Name	Date modified	Type	Size
1234	6/3/2017 12:13 PM	JPG File	83 KB
decryptor	6/3/2017 12:14 PM	Application	654 KB
exel_icon	6/3/2017 11:50 AM	Icon	162 KB
ransom_builder	4/10/2017 10:27 PM	Application	4,398 KB
ransomware	6/3/2017 12:13 PM	Application	958 KB

figure 3.2.1 This is downloaded from the test site to try to load the program ransomware. First we will download illegal programs from the web. And we will skip browser alert click download.

figure 3.2.2

and when you click download and install The system will lock our data files immediately and show the desktop picture as a message that we have been hacked.

figure 3.2.3

and when we click food open picture,

figure 3.2.4

it changed the file name Lock.maxresdefault and we can't see the picture.
